I liked Mike and think he really cares about the environment. Since I give money to PETA, I was impressed to see him raise the issue of changing the mowing schedule to later in the year so ground dwelling birds won't be disturbed during nesting season. I think his background is more in policy administration and management than technical. I have not heard anything about SDD. Surprised to hear even Renninger slowed, but have to admit this makes me feel better because I really got beat up over this one. Have a great 2014! Karen.

Hi Karen,

It is a good day to be working from home. When I left for work it was 2 degrees and now it is -5 and still dropping! They even closed the base today so my husband is home. I gingerly drove to work, it was a little slippery in spots. I hope my car starts when I go to leave this afternoon.

What do you think of Mike Sherron? I don't know him but he has interviewed for the supervisor position for my section. I know that he has been in DERR in SEDO forever so it is interesting that he applied for a supervisor position in Surface Water. But then I made the move, and also theoretically managers don't need to know technical details of the positions they supervise.

Have you heard much from Leslie about the SDD project? Sounds like the responding parties and the property owners have managed to slow down even Renninger. Sounds like Valley Asphalt took quick action regarding VI but I don't know if there are any functioning VI mitigation systems on the rest of the site. I think they were supposed to install systems in just about all of the buildings along Dryden Road and at Globe. And now the property owners (Jim City and Ron Barnett) on the OU2 portion of the site are refusing access for the RI as well. I wonder what Joan thinks of Leslie's rate of progress at the site...

Keep warm!

Laura

Hi Laura, thanks! It was good to hear from you. I never met the ladies but thought they were older than that. I knew there was some kind of a connection between them and Cornett - there was some letter in the file from Larry Cornett of Broadway Sand and Gravel asking OEPA or Montgomery County if they could put blacktop or something in one of the quarries but that lead never went anywhere.

Hope you are liking your new job - I was just in Ohio in December to do a site inspection at Vandale Junkyard with Mike Sherron. Boy that is one steeply sloped hazardous waste cap! It was snowing and I thought I was going to slide right down the hillside!

It's -17 here today and they're letting us work at home or take administrative leave. Hope all is well with you!

Karen.

Hi Karen,

Thought you might be interested in seeing this. One of the South Dayton Dump widows passed away last month.

I shared this with Maddie, my replacement on the project, so hopefully she has told Leslie.

I just thought you would be interested since you were on the project so long. Did you ever meet "the widows"?
